TITLE : MEMBRANE FOR HEMOCATHARSIS
 WITH IMPROVED ANTI-
 THROMBOGENIC PROPERTY

ABSTRACT : PROBLEM TO BE SOLVED: To obtain good biocompatibility and anti-thrombogenic properties by using a diol having phosphorylcholine structure expressed by a specified formula as part of a diol component and adding an anti-thrombogenic polyurethane or poly(urethane urea) obtained by using at least two diisocyanates.

SOLUTION: In the blood purifying membrane for hemocatharsis applicable to blood dialysis, blood dialysis filtration, blood filtration, plasma separation, oxygenators, etc., in order to obtain good anti-thrombogenic properties over a long period, a diol having phosphorylcholine structure expressed by formulas I-III is used as at least part of a diol component, and an anti-thrombogenic polyurethane or poly(urethane urea) obtained by using at least two diisocyanates is incorporated. In the formulas, R1-R3 are each 1-20C alkyl, 6-12C aryl, or the like; R4 and R5 are each 1-10C alkylene; m is an integer of 1-10; R6 is 1-20C alkyl, 6-12C aryl, or the like.
